

Due to the volatile nature of nickel, a primary component of stainless steel, Dekoron/Unitherm has found that we can no longer absorb price adjustments levied by our vendors on stainless steel tubing products.

Effective May 1, 2007, these adjustments will be added as a separate line item to any order requiring stainless steel tubing. Values for stainless steel tubing will be updated monthly.

The tables below show the nickel adjustment for common tubing sizes and materials. The total shown on the customer's invoice will equal the sum of individual adjustments for each tube in the bundle, times the length of the bundle.

Contact Dekoron/Unitherm Customer Service to obtain values for tubing types and sizes not shown in the tables.

## Seamless or Welded Tubing

Valid for Order Dates: 10/1/07 to 10/31/07

Tube Diameter	Wall Thickness	Tubing Material		
		304/304L \$/ft of tubing	316/316L \$/ft of tubing	825 \$/ft of tubing
.250"	0.035"	\$0.12	\$0.23	\$0.52
