

Unicut™ T150 1631-01001

The ideal cutter for pre-insulated and pre-fabricated tubing bundles, the DEKORON®/Unitherm™ Unicut T150 is designed to quickly and easily cut through tubing bundles. The Unicut allows anyone to make clean cuts through high density jacketing materials, slicing through bundle jackets up to 2" O.D., polyethylene through 1 1/2" I.D. and polybutylene and PVC through 1 1/4" I.D.

The Unicut utilizes a specific cutting technique to slice through non-metallic tubing and bundles. The slicing action is achieved by slightly rotating or rocking the handles on the bundle while squeezing lightly. This technique is required only when cutting pre-insulated or pre-traced tubing and plastic pipe. When cutting rubber hose and soft tubing, standard cutting techniques apply.

Features of this cost effective cutter include:

- Replaceable high-carbon, fluoropolymer coated steel blade
- Tough, durable nylon handles
- Blade closes into the handle for safe carrying and handling
- Small, light and easy to carry
- Cuts faster than a ratchet cutter

Each package includes one Unicut™ tool, one extra blade, and detailed instructions for cutting tubing bundles.
