

Stop Insulating and Start Processing!

With Dekoron® Unitherm's™ revolutionary, **Process Ready 6200 Series** of manufactured pre-insulated tubing and pipe systems there is nothing to insulate or jacket, just hang, weld and start processing.

Dekoron® Unitherm™ invented pre-insulated tubing in 1962 for use in the oil and gas industry. The **Process Ready 6200BPE** for Food and Pharmaceutical, **6200CH** for Heat Tracing and **6200CR** for Cryogenic applications are extensions of this manufactured pre-insulated process.

Our manufactured **Process Ready 6200 Series** tubing and pipe uses a proprietary aerogel, a nanoporous **hydrophobic insulation**, and a **seamless extruded Flame Retardant PVC jacket**.

The **6200 Series** tubing and pipe systems are manufactured and shipped in full 20 foot lengths with the ends stripped back ready to weld. Once the tubing/piping is hung and welded just install 6200BPE –S insulated joint splice kits and the 6200BPE-L and 6200BPE –T patent pending insulated molding covers and your system is ready to start processing.

Compared to traditional field fabrication the **6200 Series** has more efficient heat transfer and consistent thermal characteristics, features a 30% to 50% reduction in outside diameter, 10% to 30% reduction in weight and a 35% to 40% reduction in bend radius, and has improved Chloride Stress Corrosion resistance due to the **hydrophobic** nature of the insulation.

Stop insulating and start processing today with Dekoron® Unitherm's™ **Process Ready 6200 Series** manufactured tubing and pipe systems!
